1 The Bestest Package Of All Times

For most packages writing awesome documentation is hard because they have a lot of functionality, so we just try to avoid functionality in this package to make it simpler.

There is only one user-facing command:

`\TheAnswer` With `\TheAnswer` is a fully expandable command which does not need any arguments and uses a highly optimized and efficient AI algorithm to predict the question you are currently thinking about and provides the corresponding answer.

For example:

What is the answer to the ultimate question of Life, the Universe and Everything?

Answer: `\TheAnswer`

What is the answer to the ultimate question of Life, the Universe and Everything?

Answer: 42

2 The implementation

```
1 \NeedsTeXFormat{LaTeX2e}
2 \ProvidesPackage
3   {mypackage}
4   [2024-07-14 v0.1 my package]
5
```

`\TheAnswer`

```
6 \NewExpandableDocumentCommand \TheAnswer {} {42}
```

(End of definition for `\TheAnswer`. This function is documented on page 1.)

*This document corresponds to mypackage ?, dated ?.

Index

The italic numbers denote the pages where the corresponding entry is described, numbers underlined point to the definition, all others indicate the places where it is used.
